The Problem

Stakeholder Interviews

- Adults (pedagogues & parents)
- Children (possible end users)

INTERVIEW - CHILDREN - AGE

INTERVIEW - ADULTS - OCCUPATION

14-year old Michael is meeting with his friends in the park. He tells them about how he would like to be more involved in the youth community. Marie and Jo tell him about the new KJR App.

At home Michael remembers the conversation with Jo and Marie and he researches the KJR App on their website. He decides that he wants to participate and registers on the app. He then has to wait for a moderator to approve his registration.

Once Michael's registration is approved by a moderator, he begins to search for groups that he would be interested in joining.

Michael joins the group and reads the information that is already submitted. He can watch introduction videos, and see votes and discussions.

There is an upcoming event. The group wants to organise a hiking trip to a nearby forest and votes to see who might be interested. Michael votes that he will join the event.

A few days later Michael goes to his groups hiking event and meets his friends as well as new people from the group.

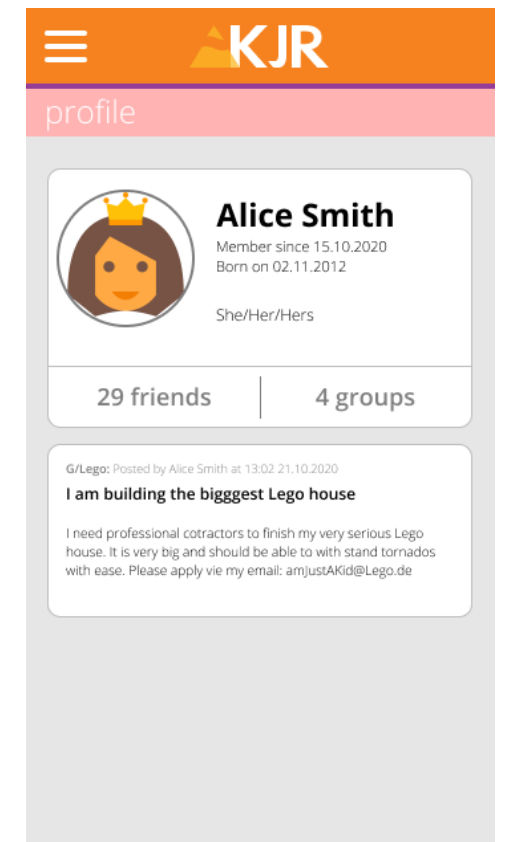

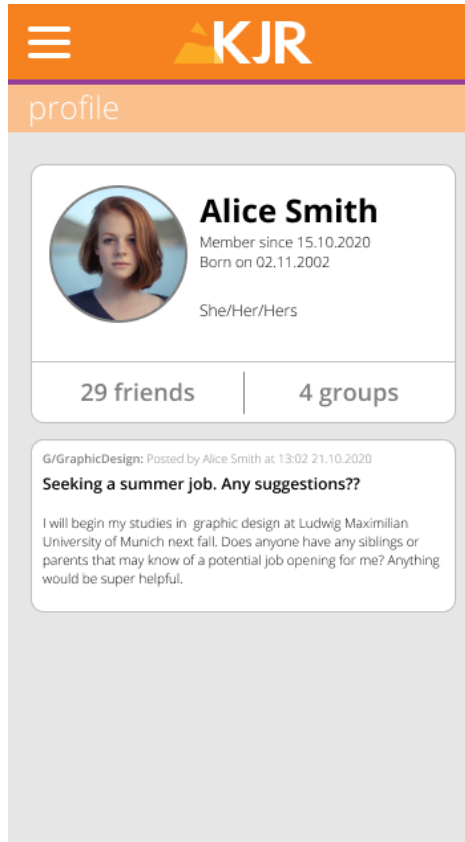

Our Challenge Contribution (Story Board)

Since this is your first time
starting the App
Please select your viewing mode.
Can later be changed in the settings.

Digital Prototype

Value to the challenge

Our prototype and underlying ideas have undergone a multitude of iterations and research based improvements

Based on target group interviews and reviews, including Educators, Children and Parents

Prototype done with alpha phase.
A development team could start programming process right now

Research gives insight into App demands from Youngsters and Educationalists, relevant beyond scope of this app

Specify technical details according to your needs

What's next?

Does the research align with your target group?

Key areas of Prototype meet expectations?

Define specifications

Conduct more research in your specific target group

Focus on features that are relevant too you

Hand Project over to Software Developer

Take Away

Diana

- It was a very good experience to work with KJR as organization and to develop something together.
- It is important to get to know the team. It was very good that we all searched for contact to each other from the beginning.
- It has been very interesting for me to meet other students from other countries and learn about them.

Adrian

- Working in an international team is a very useful experience, timezones matter
- Having a real Challenge with real data is the motivation makes getting results satisfying

Sophia

- Get to know the team. You will meet often either really early or late in the evening because of the time difference, so get to know each other and make it fun.
- I loved to get to know other cultures.
- I liked the experience to work with the KJR in this challenge. Normally university projects are for fictional end users and it was a good experience.

Min Ho

- It was my first time working on a virtual collaborative project (probably for most of us) and I feel lucky to have been able to participate in an international effort to effect real change.
- I would have loved to have studied abroad in Munich, but this was nice too, getting to know some folks across the pond even in the midst of a pandemic.

The Before After Team

Tips for Teams following in our footsteps

Understand the Problem and the environment that allowed yours to arise in the first place

Focus on Strengths and keep the feature creep light

Communication Initialization establish multiple channels as early as possible

A close-up photograph of a person's hand holding a small, white rectangular card. The card is held between the thumb and index finger, with the rest of the hand visible at the bottom. The card has the words 'DANKE :)' written on it in a bold, black, sans-serif font. The background is a plain, light-colored surface.

DANKE :)

Thank you for
your time
