

Testing the Sprint 2 Prototype:

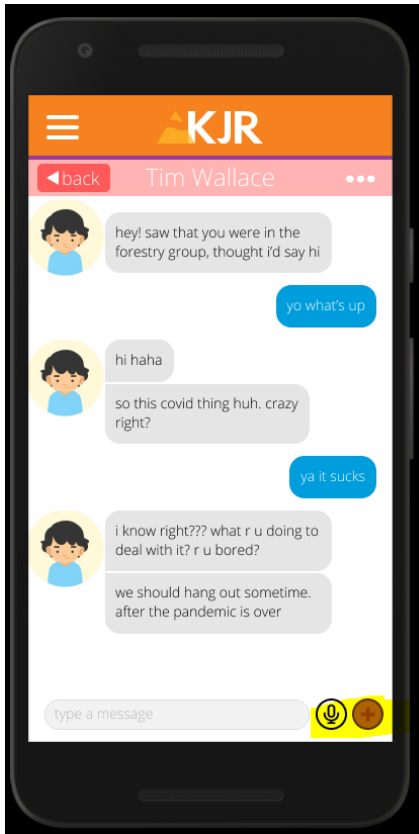

- Private chat still needs to be updated - A child does not write so much - Add more language function. And the "+" sign as function does not work:

- The "+" function made no sense, was taken out again. Date was also set wrong.

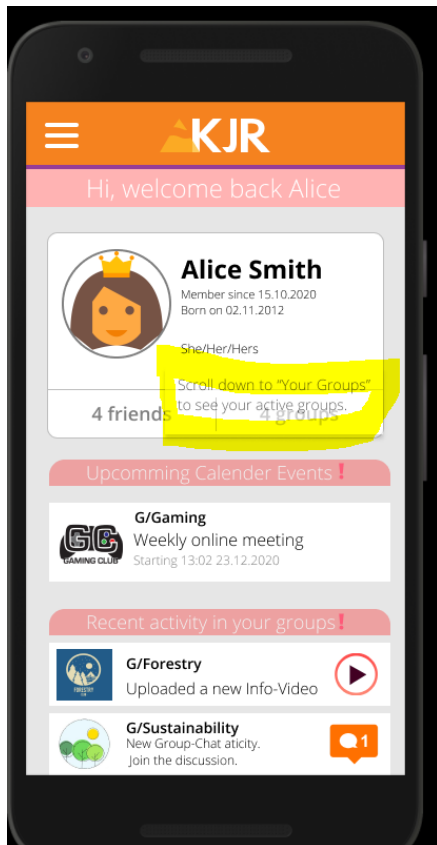

- Here the "+" symbol has no function at all, please improve:

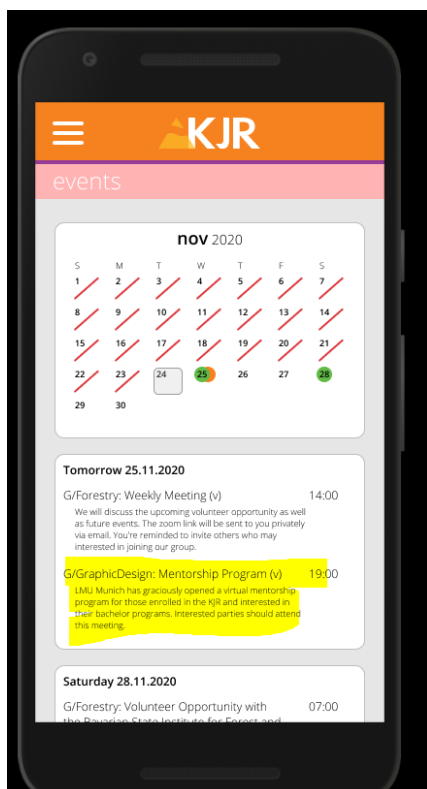

- The images are cut off at the top and are of different sizes:

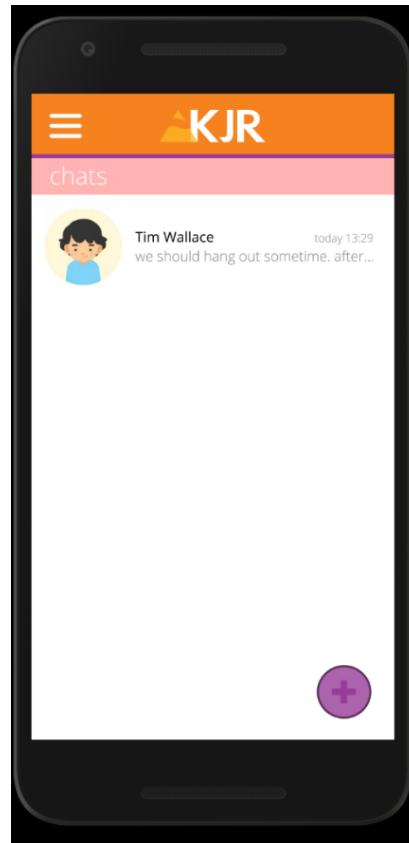

- Here you can see the text very badly and the message makes no sense at all:

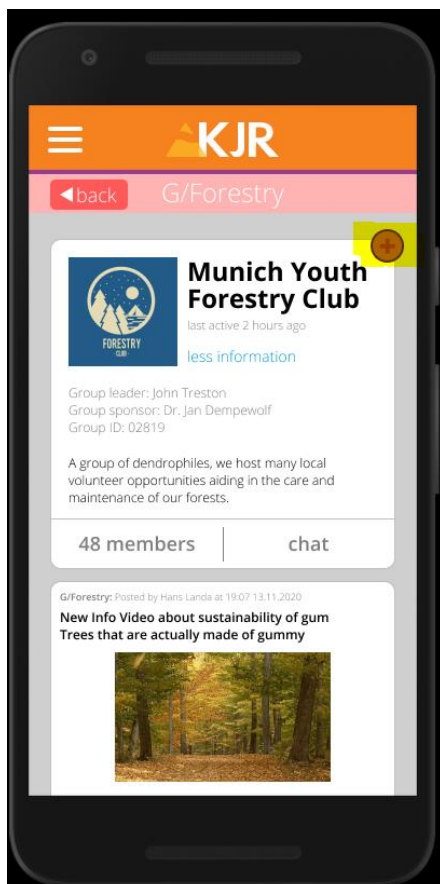

- Events are not well described (there are wrong events which are not for children):

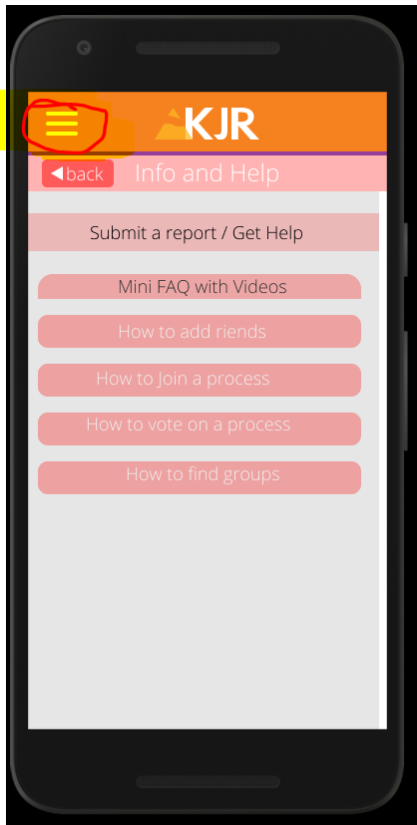

- The "back" button is not linked correctly (left picture). You don't get back to the 'my friends page' but to the 'chat page' (right image).

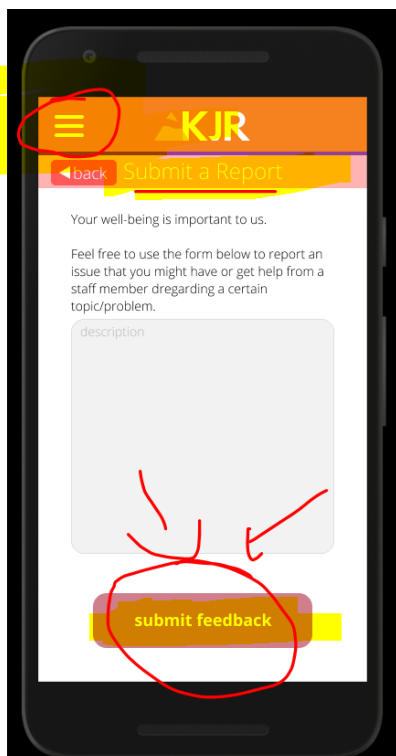

- The "+" sign does not work. There are missing points like "voting, upload picture, create a new post".

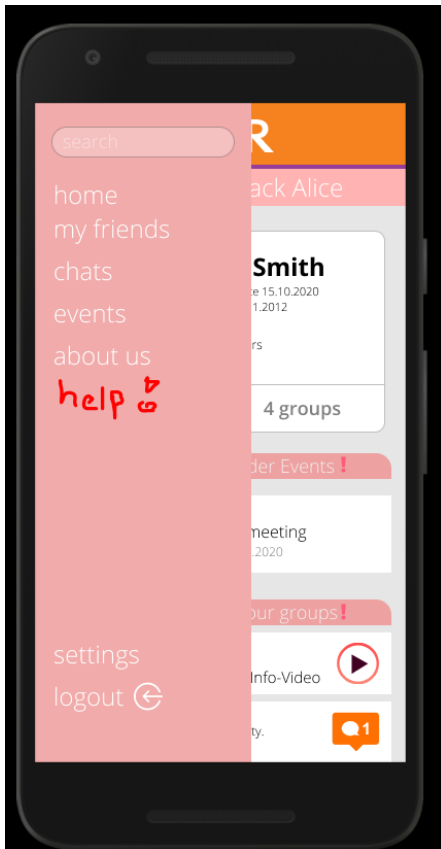

- The burger menu does not work:

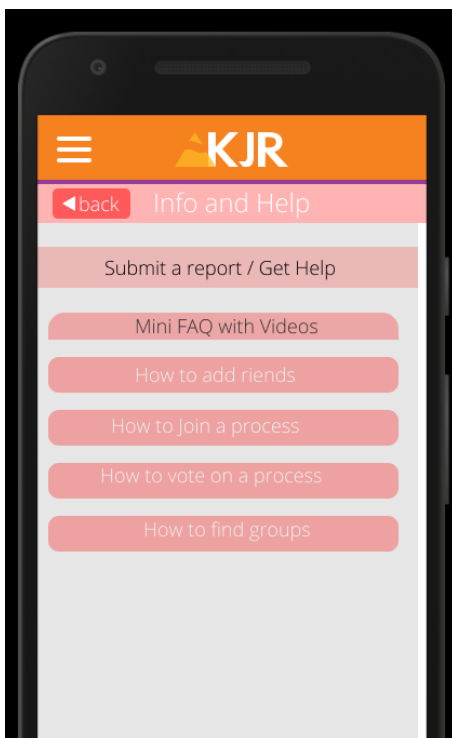

- In addition to this 'being able to write a text' part, it would be good if you could also send voice messages (otherwise children won't get any help if they can't write). The burger menu does not work and the headline does not match the previous page 100%. And this page is not a feedback page (because report is on top):

- Please add the help page to the menu (you won't find it at first go):

- Please highlight the headings differently and the individual sub-headings (e.g. 'How to add friends') are all in different positions (one too far to the left, the other too far up, etc.):

- On the events page, as soon as you click on the burger menu, the bar comes from the right side and not from the left side as usual.
- When logging out (in the menu) you should also be able to click on the text to log out (and not only on the icon). And then the loading page is missing (during logout) + wrong link to the login page (should point to the page with 'sign in' and 'sign up' at the end, as you can see below):

- The link to the profile page is missing (in the menu) and there is no profile page (which is bad. The kids can't change anything, neither their names, nor pictures etc. - privacy-wise bad).
- Settings are missing completely and have to be created suitable for children.
 - The 'Delete' button does not work either - you cannot delete an account.
- With 'About us', because there is so much text, you could theoretically insert a video or read aloud function (i.e. button) at the top (for children who cannot read properly).
- It doesn't make sense that you can't see the profile pages of the other children. You want to know beforehand who this person is who wants to be friends with me (profile pages are tested before).
